Installing Diginet Center Software

Diginet Center Software is recommended for Windows 2000 Professional Edition, but can be installed on Windows XP Home Edition, and Windows XP Professional Edition.

Diginet Center Software can be used to connect to a remote location, or to view video that has been recorded to a CD.

Installing the Software

1. Insert the Remote Software CD, labeled **Diginet Center**, into the CDROM drive of the PC in which you wish to use as the remote viewer.
2. Double-click **My Computer**.
3. Next, double-click your CDROM drive, **typically drive D: or E:** whichever drive you inserted your CD into in step 1.
4. Open the folder labeled **Kodicom Center V 4.120 Patch 2**
5. Next, open the folder labeled **Data1**.
6. Now Double-click on **setup.exe**.
7. Click on **Next**.
8. Accept the License Agreement, and click **Next**.
9. Click on **Next**.
10. Once the software finishes installing you click on **Finish** and then reboot your system.
11. When you reboot you will see multiple icons on your desktop. You can remove **Emergency Monitor, Health Monitor, Intelli Upgrader, and Remote Backup Server**. This is your preference. DO NOT DELETE DIGINET CENTER.
12. The program you will now use to connect to a remote host, or view recorded video is **Diginet Center**.
